

## DESCAL CARB

Descaling decarbonising in two layers

### FEATURES

It is a biphasic product which, thanks to its special ingredients, acts by carrying out a triple action: melt, descaling and decarbonising.

Active on very heavy dirt such as: carbonaceous residues, oil, grease and tarry sludge, doesn't affect metal surfaces in contrast to similar products on the market.

Doesn't affect the metals that normally make up engine heads, pistons, carburetors and gear boxes, and even the various plastic components.

Used in special tanks (with a conical bottom, with the possibility of bleeding), the product is able to self-eliminate the residues released during the degreasing phase, thus maintaining its operating efficiency.

**DESCAL CARB** can also be used cold and is ideal for: mechanics, car dealers, coachbuilders, maintenance technicians, burners.

### CHEMICAL/PHYSICAL DATA

Physical state	: liquid, with 2 layers
Color	: amber
Density <sub>(20°C)</sub>	: 1,3 Kg/lit
Flammability	: not flammable

### HOW TO USE

Vigorously shake the basket in order to prepare a mixture with both components and immediately pour into a tank.

Immerse the pieces in the first layer (the lower one), leaving them immersed until the complete swelling of the sludge and varnish.

At the end rinse accurately
