

FORMAT ACID

Disinfectant / sanitizing for toilets

CHARACTERISTICS

FORMAT ACID is a concentrated product for cleaning and deodorizing toilet facilities. Eliminates stains and bad smells, dissolves completely flakes, tartar, stains due to fat, soaps and limestone.

In the formulation of the product, quaternary ammonium salts were added to give it an excellent sanitizing action.

The **FORMAT ACID** is prepared in gel form: this allows it to adhere better to the vertical surfaces and not to slip away quickly. The product then acts in a faster and more accurate way.

CHEMICAL-PHYSICAL DATA

Physical state	: trasparente gel
Colour	: aquamarine
Solubility in water	: total
Odor	: pine
Density	: 1,1
pH	: 1,8 sol. 1%
Flammability	: not inflammable

HOW TO USE

For the toilet

It is not necessary to remove the water. Wet a brush with 20 cc of **FORMAT ACID** and pass it over the entire inner surface of the wc, then rinse

For a deodorizing action, pour 20-30 cc of product into the toilet water

For vertical surfaces.

Wet a brush with 20 cc of **FORMAT ACID** and pass it thoroughly across the surface, pour 20 to 40 cc of product around and inside the drain and finally rinse.

In the 1 kg package, the product is supplied with a dispensing nozzle that allows direct application of the gel on the surface to be descaled.

FORMAT ACID, diluted in water at 10-20%, can be used for general cleaning operations.
