

METALDEC Ag

Pickling agent for silver

FEATURES

METALDEC Ag is a triple action chemical specialty for the treatment of silver.

With a single pass it is able to: descale, degrease and brighten any artifact in silver, restoring its original appearance; not containing abrasive substances, unlike the most common polish, it doesn't form micro abrasions which in the long run make the silver shine characteristic.

Thanks also to its components, **METALDEC Ag** eliminates the unsightly in a few seconds, acting (cold) even on the borax.

The product is ideal for: goldsmiths, jewelers, hotels and for the treatment of silverware in your own home.

CHEMICAL/PHYSICAL DATA

| | |
|---------------------------|-----------------|
| Physical state | : liquid |
| Color | : colorless |
| Density _(15°C) | : 1,1 Kg/lt |
| Solub. in water | : total |
| Flammability | : not flammable |
| pH _(sol. 1%) | : 1,1 |
| Time out of dust | : 15 minutes. |

HOW TO USE

For the silver industry. Use the product as it is by immersion in the tank. Leave the pieces to soak for a few minutes, then make a thorough and abundant rinse with subsequent drying. At this point it is necessary to follow the treatment of 'finishing' that preserves

the metal from further formation of the sulfurous film.

For the silverware. Prepare an aqueous solution of the product at 30% (300 g / l) if the piece is treated by immersion, or at 50% (500 g / l) if the piece is treated with a soft sponge or brush. At the end follow a careful rinsing with drying.

WARNINGS: the product should not be used on aluminum, zinc, magnesium and their alloys; also pay attention to the rhodium silver.
