

METALDEC GOLD

Descaler for gold

FEATURES

METALDEC GOLD is a chemical specialty in the descaling and treatment of gold.

With a single pass it is able to: descale, degrease and brighten any artifact in gold, restoring its original appearance; not containing abrasive substances, unlike the most common polish, it doesn't form micro abrasions which in the long run make the silver shine characteristic. The product is ideal for: goldsmiths, jewelers, hotels and for the treatment of jewelry and pottery in your own home.

CHEMICAL/PHYSICAL DATA

Physical state	: liquid
Color	: colorless
Density _(15°C)	: 1,1 Kg/lt
Solub. in water	: total
Flammability	: not flammable
pH _(sol. 1%)	: 1,1

HOW TO USE

For the gold industry. Use the product as it is by immersion in the tank. Leave the pieces to stand for a few minutes, then make a thorough and abundant rinse with subsequent drying.

For the pottery. Prepare an aqueous solution of the product at 30% (300 g / l) if the piece is treated by immersion, or at 50% (500 g / l) if the piece is treated with a soft sponge or brush. At the end follow a careful rinsing with drying.

WARNINGS: the product should not be used on aluminum, zinc, magnesium and other alloys.
