

## NERO GOMME

### Revitalizing and preservative for tires

#### FEATURES

**NERO GOMME** is a product specially formulated to revive the tires of all vehicles in general.

Some types of products are available on the market, with different characteristics:

- Products in the form of Gel: They clean thoroughly and at the same time create a shiny effect. They allow you to adjust the intensity depending on how much product you dose.
- WET EFFECT products: used in exhibitions or tuning competitions, extremely shiny and wet; they are used to give an aggressive and showy look..
- Complete products (**NERO GOMME**): prevent shrinkage and cracking on natural or synthetic rubber materials and give the treated surfaces the original brilliance reviving the color.

**NERO GOMME** doesn't contain acids or other aggressive substances and therefore its use doesn't involve particular precautions; protects the surfaces from atmospheric agents and leaves them a temporary repellency against atmospheric dust.

The product does NOT contain silicones which, although useful in the formulation, could contaminate the brake discs.

#### CHEMICAL/PHYSICAL DATA

Color:	green
Density:	1 Kg/Lt
Odor:	balsamic
