

NUVIS CREAM SPRAY

Protective cream with barrier effect

FEATURES

It is a spray barrier cream designed specifically for temporary protection of the skin on the hands. It forms an invisible film that resists the aggressive action of acidic, alkaline, lubricant-cooling emulsions and irritants in general. It doesn't stop the transpiration of the skin, it has an effectiveness of about four hours (after which it is necessary to repeat the treatment if the exposure continues) and resists the washing action of the water

Ideal for: masons allergic to cement dust, mechanics who have frequent contact with cooling lubricants, painters, and anyone who manipulates chemicals of various kinds.

CHEMICAL/PHYSICAL DATA

Packaging	:aerosol 400 ml
Physical state	:cream
Color	:white
Solub. in water	:insoluble

MODALITA' D'USO

Wash and dry your hands thoroughly; shake the bottle and spray a 'nut' on the palm of one hand.

Spread until completely absorbed. Avoid the excess of product that would end up creating an annoying greasiness.

Important. The **NUVIS CREAM** is a cosmetic product and the related dossier is kept at the Kemper S.r.l.
