

PIRETRO SPRAY

Insecticide aerosol based on pyrethrum

FEATURES

The product **PIRETRO SPRAY** is an insecticide based on natural pyrethrum, mainly repellent, due to the high concentration of pyrethrum. It works by blocking the nervous system of insects, thus avoiding possible addictions to the assets.

The product has immediate effect against flying and creeping insects such as flies, mosquitoes, wasps, gadflies, hornets, beetles, ants, fleas.

It is used in all sectors of the food and community industries (kitchens, hotels, restaurants, etc.).

The Piperonyl Butoxide present in the formula produces a synergistic effect that enhances the activity of the insecticide base. Each cylinder guarantees 3000 deliveries and a duration of 30 days (with a 15-minute interval between deliveries).

COMPOSITION

- | | |
|------------------------------------|--------|
| ◆ 25% pyrethrum extract | 7.2% |
| ◆ Piperonyl Butoxide | 15.4% |
| ◆ Solvents and propellants q.b. at | 100.0% |

HOW TO USE

The product bottle must be inserted in the appropriate housing of the **DISPENSER**, which must be adjusted according to the width of the environment to be treated. As an example, keep in mind that an adjustment that provides a spray every 10 minutes is enough to treat an environment of about 200 cubic meters.

Before use, carefully read the warnings on the package and in any case:

- Don't spray the product on food, beverages, people or animals.
 - Don't spray the product on curtains, surfaces or materials that could be damaged.
 - Ventilate sufficiently the rooms in which it is used before staying there again.
- Registration No. 14746 of the Ministry of Health. (Chamber of Commerce No. 18826-BO)
