METALDEC AI

Etching solution for aluminium

CHARACTERISTICS

Specific product for the de-rusting and degreasing of surfaces in aluminium and aluminium alloys.

Thanks to its chemical composition, no abrasives are used which damage the shine of objects irreversibly; it removes: oxidations, scales of different nature, greasy substances, smog and contaminants in general. It does not form any unaesthetic stain but leaves the entire treated surface perfectly even. METALDEC AI is particularly recommended for sectors that process aluminium, such as frame-fitters, and for all those activities that feature furniture and equipment with aluminium components (counters, tables, chairs, engine parts, etc.). Excellent for road-based transports, for cleaning edges.

PHYSICAL-CHEMICAL CHARACTERISTICS

Physical state: liquid

Colour: pink

Odour: odourless

Density: 1.25

pH: 1.5 (1% sol.)

METHODS OF USE

Prepare a water solution with 5-10% of product (50-100 gr/lit), using containers in plastic and not metal. Distribute the product evenly on the surface to treat using a sponge, a brush or spray, from bottom to top in case of walls. Leave it on for 1-2 minutes and then rinse thoroughly. Repeat the operation for tougher dirt.

WARNING: Avoid contact on glass and anodized aluminium (in case of accidental contact, rinse immediately).
